## **Eliminator™ Lubrication Pads**

THICK TURRET TOOLING

# MATE ELIMINATOR™ THICK TURRET LUBRICATION PADS

ELIMINATOR PADS

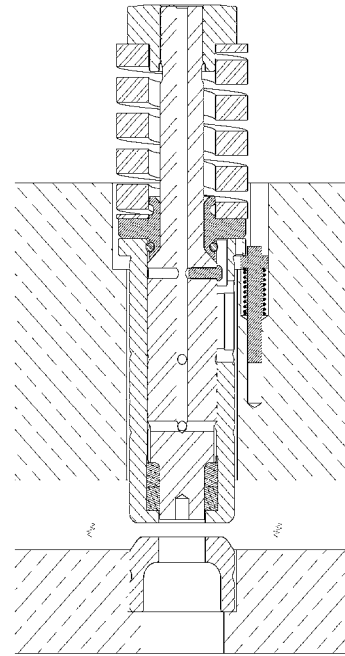

Designed for thick turret punch assemblies, Mate Eliminator™ punch tip lubrication pads assist in keeping the punch tip lubricated during the punching process.

Studies have shown that properly lubricated punch tips help extend tool life and keep the punch from overheating. In many situations, lubrication helps eliminate unwanted galling during the punching process.

Mate Eliminator lubrication pads are easy to install, especially on Mate Ultra TEC® A and B stations. Simply use the punch and stripper to “punch” the hole into the foam. Saturate the pad with 46-68 ISO viscosity hydraulic oil and you’re ready for gall-free punching.

## MATE ELIMINATOR LUBRICATION PADS:

- Made from polyether filter foam
- Available in A through E stations
- Compatible with all thick turret punch presses
- Made in U.S.A.

<b>Station</b>	<b>Part Number</b>
A station, qty of 5	MATE02028
B station, qty of 5	MATE02029
C station, qty of 5	MATE02030
D station, qty of 4	MATE02031
E station, qty of 4	MATE02032
